## Skills

- HTML / CSS
- Responsive Design
- Tailwind/ Bootstrap
- Javascript/Jquery
- PHP
- Laravel
- Backend Development
- SQL
- Git / Github
- Wordpress

## Language

English

Urdu

## Experience

### 2022 - 2023

#### Freelance Project

#### Property Management System

Create a property management system with user-friendly features to add, update, and remove properties, categorize them, and calculate installments. Set up a customer database for managing customer records and purchase history. Develop an installment plan generator for properties and customers, track payments, and implement security with user authentication and access control. Design an intuitive user interface for easy system interaction.

### 2023

#### Freelance Project

#### Adventure In Dubai

I improved the SEO of an existing project by implementing several key enhancements. This included adding recent posts to the single blog sidebar and featuring tours at the bottom of single blog posts to boost user engagement and cross-linking. Canonical tags were added to prevent duplicate content issues, and structured FAQ schema markup was implemented to enhance search engine understanding. Optimization of meta titles and descriptions was performed for better visibility. Additionally, website speed was improved through caching, and an admin option to categorize blogs according to tour categories was added for better organization and SEO.

### 2023

#### Freelance Project

#### Cybergen Job Portal

In this project, I implemented a "Forgot Password" feature that sends secure reset links to users' email addresses, ensuring a secure password recovery process. To enhance login security, I integrated Google 2FA authentication for added protection. For admin convenience, I added a maintenance toggle mode with a secret key for developers, giving them control over the system's maintenance status. Additionally, I addressed speed issues by identifying and optimizing code, databases, and assets to significantly improve website performance.

### 2023

#### Final Year Project

#### Form Creator

My final year project is a secure web application for form creation and management. It allows users to create up to 10 forms with various question types. Users can set time limits for form submissions, and results are stored in a database and accessible in Excel format. It provides a user-friendly experience for both form creators and fillers, simplifying data collection and analysis.
